PITCH.MD -- 90-SECOND HACKATHON PITCH (FRETBOX)

Say the quotes, click the rest. Two tabs open: Tab 1 = Admin (‘ADMIN001‘/‘admin123‘), Tab 2 = Student (‘STU001‘/‘student123‘). Backend running (‘cd backend && node server.js‘).

0-10s -- Hook (hold up phone + laptop)

"Every day, a student checks a notice board, a WhatsApp group, a paper register, and a counter queue -- just to ask: is my leave approved? Campus Hub makes that one tap."

10-35s -- Student pain -> action (Tab 2, ‘student-dashboard.html‘)

*"I’m Rahul, third sem. My attendance, today’s classes, and only *my* notices -- auto-filtered by department and semester. My gate-pass is pending -- one request in ‘requests.html‘, and I get a printable slip that works offline as gate proof."*

Click: dashboard -> submit gate-pass.

35-55s -- Campus life loop (same tab)

"Hostel fan dies -- ‘complaints.html‘, Electrical, Room 204. It gets a 24-hour SLA timer, not a forgotten register entry. Mess food bad? One star rating in ‘mess.html‘. Confused? I ask Campus Copilot -- it answers from my live data, in Hindi too."

Click: complaint submit -> Copilot: "What is my attendance?"

55-75s -- Admin visibility (Tab 1, ‘ops-dashboard.html‘)

"Every action lands here. Total pending, open complaints, average resolve time, SLA breaches, mess rating, low attendance. Oldest-first queue, recurring issues -- fix Electrical once instead of daily. And notices go out as push alerts, targeted -- no WhatsApp noise."

Point to each tile.

75-90s -- Closer (DevTools -> Offline, reload)

"And it works where campus Wi-Fi doesn’t. Offline -- reload -- the form still saves, Hindi toggle, Lite mode for 2G and low-end phones. One hub, zero paper, nobody left out. Thank you."

Q&A armor

- "Real-time?" -> Shared backend ‘/api/ops/summary‘, instant locally.
- "Scale?" -> Express shapes match Postgres/Mongo; JWT deps already in ‘backend/package.json‘.
- "AI?" -> Copilot grounded in live campus records, offline-first; LLM pluggable.
- "Push?" -> VAPID Web Push (‘sw.js‘, ‘push-client.js‘); opt-in toggle in ‘student-settings.html‘; offline queue stays the fallback.
- Backend down? -> "Fully offline-first -- localStorage demo continues, syncs when online."
- Login fails? -> Open ‘users.html‘ once (seeds demo users), retry.

Click order

‘index.html‘ -> ‘student-dashboard.html‘ -> ‘requests.html‘ -> ‘complaints.html‘ -> ‘mess.html‘ -> ‘ops-dashboard.html‘ -> offline reload + Hindi + Lite
